

Diagnosing Brand X's Campaign Health

April 2026

Presented by **Nidhi Rao**

Declining ROAS - Possible Causes & Diagnosis

$$\text{ROAS} = \frac{\text{Revenue Attributable to Ads}}{\text{Ad Spend}}$$

Revenue & Spend by Week - Dec 2021:

Possible Causes for declining ROAS:

- 1 Pixel / Tracking issues
- 2 Creative/ad content
- 3 Audience Targeting
- 4 Offer / fulfilment issues
- 5 Bidding Strategy / Competitors

Characteristics

Sudden drops

High impressions, Low CTR

High impressions, Low CTR

Stable CTR, Low Revenue

Increasing CPM/CPC,
Decreasing Spend

Declining ROAS - Analysis by City, Audience, Offer

City

Hypothesis: Competition by Market

Most cities:

CPC ↑ Spend ↓ Revenue ↓

Exception - City ID 198:

CPC ↑ Spend ↑ Revenue ↑

Audience

Hypothesis: Inefficient targeting

In Week 4,

All Eaters: -87% spend
New Eaters: +16% spend

Result: Impressions **decreased**
in week 4 for New Eaters

Offer

Hypothesis: Inefficient ad product bundling

Inconclusive change in ROAS by offer type. However,

CTR for Ads only: **1.42%**

CTR for Ads + Offers: **1.74%**

Recommendations for Brand X in 2022

From our analysis of Uber Ads offerings with Brand X,
we found that:

Ads + Offers to All Eaters

10x
ROAS

Ads only to New Eaters

6x
ROAS

Campaign objectives may vary by journey stage:

Testing for Cannibalization

Pause Test

1. Pause paid spending/campaigns for 2-4 weeks
2. Monitor changes in total revenue, conversions, and CTR
3. Analyze results and compare to pre-pause

Incremental Lift - A/B Test

1. Split groups into control & test.
2. Pause ads for test group only.
3. Monitor changes in total revenue, conversions, and CTR over 2-4 weeks.

Metrics to track:

Total Revenue

Total conversions/orders

Paid Revenue

Paid Spend

Organic CTR

Thank You!
